NIHR | National Institute for Health and Care Research

Summary

Reference Number	NIHR303381
Lead Applicant	Dr Dawn Cutler
Research Title	HEE/NIHR ICA Pre-doctoral Clinical and Practitioner Academic Fellowship 2023
Total Research Cost	41,802.00

Our purpose for collecting this data is to communicate with you about your application and have the necessary information to evaluate you for a grant. The data we collect here is collected in the public interest. Information provided here may be subject to Freedom of Information requests.

The NIHR Academy is part of the Department for Health and Social Care (DHSC), National Institute for Health and Care Research (NIHR). The contracting agent for NIHR Academy is the Leeds Teaching Hospital Trust (LTHT). The DHSC is the Data Controller and LTHT is the Data Processor under the General Data Protection Regulation (GDPR) EC 2016/679. DHSC NIHR respects the privacy of individuals who share their data and processes it in a manner that meets the requirements of GDPR. The DHSC Data Protection Officer can be contacted by email at: data_protection@dhsc.gov.uk

The NIHR privacy policy includes further information including ways we may use your data, our contact details and details on your individual rights regarding how your data is used. Your data may be shared across the NIHR, including with other coordinating centres, to allow the application to be managed and for statistical analysis, and with external grant reviewers as part of the process for managing the allocation of a grant. This notice is under constant review and will be updated and / or revised based on that review as appropriate.

1. Application Summary Information

Host organisation (which will administer any award)
Great Ormond Street Hospital For Children NHS Foundation Trust

Partner Organisation	University College London

Application Type Please list Partnership Fellowship.	N/A

Proposed start date if grant awarded	01/09/2023

PCAF Award Type Two distinct funding offers are available through the PCAF scheme allowing applicants to choose the level of support most appropriate to their individual requirements (full details of what is available through each stream are available in the Applicant Guidance Notes). Please select the PCAF award type you wish to apply for.
PCAF Bridge

WTE% (PCAF Bridge)	0.40
Award duration (months)	12

Please describe your research career to date

Clinical-Academic Career Aspirations
I have worked for 15 years as a psychologist in child and adolescent mental health (CAMH) and have been a senior clinician, supervisor and service manager for over 10 years. The PCAF bridge will enable me to build upon my research experience and knowledge from my doctorate in clinical psychology and ensure my NIHR doctoral application and project plan is well thought out, robust and impactful. Completing this PhD will develop the research knowledge and skills foundation I need alongside my clinical expertise to shape a future career in which clinical and academic roles are combined and complementary, meaning that I can complete academically robust research to support the provision and development of services that I am passionate about.

My current work is on Mildred Creak Unit, an inpatient CAMH service (CAMHS) working with with children experiencing the most severe and complex mental health difficulties. Inpatient treatment is complex and highly specialist and admissions last many months. Families describe difficulties accessing effective treatment and feeling that inpatient treatment is a last resort. Research which demonstrates the ways in which inpatient treatment can help will support children and families to consider admission as a difficult but positive choice. My previous experience in outpatient CAMHS makes clear to me that inpatient treatment is qualitatively different in the intervention provided, not just a more intensive version of outpatient treatments. One theoretical model used to describe this is the therapeutic milieu (Crouch, 1998). It emphasizes creating an environment for the child where all aspects of care and interaction are the therapy; the ward environment and community are the treatment. Research on the approach to inpatient care would enable children to access an always improving, evidence-based, clearly theorised and well understood complex intervention and would support the NHS in ensuring there is good access to services of consistent quality.

Clinical Experience
NHS: CAMHS and Paediatric Psychology
The scientist-practitioner model of psychology means that research has always been part of my day-to-day clinical practice, for example using Routine Outcome Measures (ROMS) to guide therapeutic work with individuals. I have a robust knowledge of data collection and analysis in clinical contexts and have led projects which combine clinical and research skills to improve outcomes for patients, including:

- Implementation of Children and Young People's Improving Access to Psychological Therapies national service development programme in CAMHS services in Hackney. Our work included increased support for young people's participation in the development and running of services and increasing the use of evidence based ROMS in the service.
- Expanding psychology services within gastroenterology utilising data from clinician interviews, analysis of referral patterns, mapping the patient population and administration of the Strengths and Difficulties Questionnaire to demonstrate need
- In response to the COVID-19 pandemic, I co-led the development and running of the staff support service

at Great Ormond Street Hospital, this included a rapid synthesis of the evidence for methods of supporting staff in pandemic contexts.

- As a psychologist my knowledge of psychosocial quantitative and qualitative assessment methods has meant that I have led audits and service evaluations on the impact of health conditions on children and their families and how we can best help.

I have experience of disseminating audits and service evaluations to a range of audiences and have been successful in having abstracts selected at conference and published. In 2019 I was an invited speaker at the British Society for Allergy & Clinical Immunology Conference presenting on 'managing the patient's perspective in non-IgE food allergy'.

Charity sector: Power the Fight
Since its inception in 2019 I have been a member of the advisory group for a charity called 'Power the Fight' working to empower communities to end youth violence. Since 2021 I have worked as a strategic consultant and reflective practice supervisor. This work connects to my values around reducing the barriers to accessing therapeutic support, particularly those which are due to systemic racism. I was an author for a successful bid for funding from the Mayor of London's Violence Reduction Unit for the 'Therapeutic Intervention for Peace' programme, which responds to the challenges faced by young people and communities through culturally sensitive support for those who are most impacted by youth violence.

Academic and Research Experience
I am research lead for Mildred Creak Unit. I have supported the team to engage with research via a monthly research forum and support for individual projects and interests across disciplines. I have supervised three undergraduate and masters psychology students on theses and projects and all of these have been presented as posters at conferences. I am a member of the wider department research committee working on the development of research structure and strategy.

I was successful in a competitive application for an internship funded by GOSH BRC NIHR to develop my research questions and fellowship application. The internship has supported me to navigate the processes for ongoing funding of research projects and roles and this is key to enabling me to develop equivalent clinical and academic roles in the future.

I have a strong academic background at undergraduate and post-graduate level. My undergraduate research was the highest marked element of my final year. My doctorate in clinical psychology is a combined clinical-academic degree and my doctoral thesis was a mixed methods study of quality of life in Tourette Syndrome, written up for successful publication. I shared this research at a UK conference for families and schools about Tourette Syndrome in 2007.

Prior to clinical training I worked in the Dementia Research Centre within UCL, a national and international centre of excellence for dementia research. I was part of a team working on small and large scale randomised control trials, completing neuropsychological assessments and managing the co-ordination of study visits and data collection within these.

Summary
I have a strong breadth and depth of clinical experience and the bridge award and doctoral fellowships will enable me to develop my existing research skills and knowledge so that I can establish a relevant and impactful clinical-academic career.

Has this application, or a similar application, previously been submitted to this or any other funding body?
No

Mitigating Factors Please use this question to detail any mitigating factors you wish to make the Selection Committee aware of. The Applicant Guidance Notes provide guidance regarding completion of this question.

4. Training & Development and Research Support

Research Plan

Planned Doctoral Research Question: Working with complex and high-risk cases in child mental health: How, why, and for whom does mental health inpatient care help and not help?

There is increasing incidence of mental health difficulties for children, including the most severe difficulties with the most significant impact on children's lives requiring the most intensive treatment. There is some limited research as to the effectiveness of the treatment provided by children's inpatient CAMHS in the UK (Jacobs et al, 2009). Little of this research evidences the theoretical model of change or identifies the key elements of the complex intervention that is inpatient treatment. Given the cost of inpatient care to the NHS and the emotional and physical demands it places on families there is a responsibility to continue to develop our understanding of the key elements of interventions and the difficulties for which they are most useful, to be clear when it is the most effective intervention to support change which would not be possible in the community.

My doctoral study will be mixed method including both qualitative and quantitative elements with a focus on real-world evidence and the translation of academic theory into practice and treatment in NHS services. In the bridge award I will

- develop subject knowledge of relevant academic literature and research methods
- shape a clear research question to address identified gaps in the evidence and theory
- identify proposed methods for my doctoral study and the training that will be needed to use these effectively.

Proposed training and development programme

My training and development plan for the PCAF Bridge includes three key elements alongside development of my clinical practice: a scoping review, Patient and Public Involvement and Engagement (PPIE) work and development of the doctoral study and fellowship application. I have identified training to support me in these tasks as part of the bridge fellowship and plan to access additional training in specifically indicated research methodologies as part of a future doctorate.

1. Develop subject knowledge of relevant academic psychological theory relating to inpatient CAMHS treatment by completing a scoping review

A scoping review during the PCAF bridge will identify knowledge gaps and clarify key concepts in the literature relating to inpatient CAMHS and models of treatment. It will both allow me to refine my research question and identify if a systematic review should be included as part of my doctorate. Mapping current broad evidence is important because my initial reading identifies that there is differing and overlapping language and theory describing the same phenomena. For example our unit's theoretical model is that of 'therapeutic milieu' - whilst this term is now relatively infrequently used and researched there is an active area of psychological research in the linked concepts of mentalisation, epistemic trust, and therapeutic relationships. Equivalent models are used in forensic settings and therapeutic schools and knowledge in this area would also be considered.

I have experience in narrative review including using a defined search strategy but no experience of completing scoping or systematic reviews. Attending the **JBI Scoping Review course** in September 2023 will equip me with the knowledge to plan and undertake a scoping review and is well timed to begin the scoping review early in my fellowship.

2. Patient and Public Involvement (PPI) work

At a January 2023 ward open day, where previous patients, families and staff are invited back to visit, I had a poster inviting expressions of interest in supporting research on the unit and spoke to families in attendance. There was enthusiasm for research from young people discharged recently and from those discharged longer ago who are now young adults, as well as parents. Many were happy for me to take their details so that they could hear more about how they can be involved.

I plan three phases of consultation to allow these experts by experience to contribute to the research.

1. Contact those who have agreed to be contacted about future research opportunities to provide further information and ask if they are interested in involvement
2. Phone calls (30 minutes) with interested individuals about the project and to consider the best methods to support participation

3. Discussion groups for more formal development of the project, methods and research questions
Alongside this I am contacting existing groups of experts by experience in this area for their perspectives.

This work will enable a strong research proposal and doctoral application which is grounded in clinical experience and strongly connected to patient and family perspectives. I also hope to identify people who would like to continue their involvement as a steering group for my doctoral study.

I do not have specific training in PPI work, although my clinical skills will be helpful in stages such as group facilitation. I will develop my PPI skills by attending the award-winning and well evaluated free **PPI training** run by University College London Hospitals. Alongside this I will use guidance, toolkits and resources which will help me understand and respond to the particular challenges when involving children in PPI. The experience of my supervisory team and hospital participation lead will be of value in this area.

3. Develop knowledge of relevant methodologies and plan a doctoral level research project to write a successful application for a doctoral clinical-academic fellowship

I will use the PCAF bridge to establish the sequence of inter-related questions and phases of project I need to develop my doctoral application. This PCAF bridge will allow me broaden my methodological knowledge by attending clinical and academic departmental courses and seminars, meeting with academic colleagues, learning with my supervisory team and engaging with the linked academic contexts.

I have some experience of basic qualitative and quantitative analysis which will enable me to consider these methodologies in planning. It would be helpful to develop my knowledge of implementation science to scope out whether to include more formal training in this approach in my doctoral fellowship training programme. Implementation science seeks to understand how theories and evidence translate into practice in real world contexts. Given that inpatient treatment is a complex intervention requiring the translation of theory to practice by a large staff team, methods of implementation science such as logic models will be important to explore in both the PCAF bridge and in the early stages of future doctoral research.

During the bridge I will develop my knowledge of implementation science by attending a **course on Developing and Evaluating Complex Interventions** run by Dr Skivington hosted by the National Centre for Research Methods. I will also research independently, access free short courses and attend a **research conference run by the Centre for Implementation Science** at King's College London drawing together UK research using the methods of implementations science.

I will attend a **free masterclass** in early spring 2024 run by NIHR Research Design Service which works though how to write a grant application that is strong from a methodological point of view, reads well and presents a convincing case for funding. This masterclass will support me in writing my doctoral application, the skills will also be relevant to my future career.

Clinical and Research Practice Development

10% of my fellowship time will be used to develop my clinical practice and to enable me take up additional research roles and responsibilities in local and national contexts linked to my clinical role. This would position me to be able to begin my doctoral study better connected in relevant clinical networks and with a clear theoretical grounding in all my practice.

Primary Academic Supervisor

PRIMARY ACADEMIC SUPERVISOR 1

Name	Professor Julian Edbrooke-Childs

Institution	University College London

Position	Professor of Evidence Based Child and Adolescent Mental Health

Description of support provided

I am Professor of Evidence-Based Child and Adolescent Mental Health at UCL, Head of Evaluation at the Anna Freud Centre, and Co-Director of the Evidence Based Practice Unit (EBPU), which is an applied child and adolescent mental health research group across UCL and the Anna Freud Centre. To date, I have secured over £15 million in research funding (£2,311,119 as PI and £12,716,372 as Co-I) and over £3 million in non-research funding (£3,381,325) for evaluation, consultancy, and service delivery projects. I have authored over 100 peer-reviewed publications. My research focuses on empowering young people to actively manage their mental health and mental health care, with a particular focus on social inequalities.

Expertise in Research Area of Interest and Relevant Methodologies

I have been PI on 16 research grants and Co-I or senior lead on another 11 research grants. I have directly utilised multiple methodologies both qualitative and quantitative (including framework analysis, regression analysis, and multilevel modelling) in addition to systematic reviews.

The work that will be most relevant in supervising Dawn is research with vulnerable populations of children and young people. For example, I lead two, three-year national evaluations of Community Forensic Child and Adolescent Mental Health Services (Community F:CAMHS) and the Framework for Integrated Care (SECURE STAIRS) in the children and young people's secure estate (under-18 young offender institutions, secure children's homes, and secure training centres). These studies involved mixed-methods realist process evaluation designs, which is a theory-driven approach in which multiple data sources are collected and synthesised to test pre-specified theories of what impact an intervention will have, for whom, and why. This will be relevant when supporting Dawn in the design of her proposal.

I have led or been involved in a number of projects examining how to best support vulnerable children and young people who are on the cusp of involvement with the youth justice system. I am co-PI on a current project examining the implementation and impact of a new role to improve psychological care for children and young people in inpatient mental health settings or with high levels of need being supported in the community. This experience equips me with contextual knowledge relevant to the development of Dawn's PhD proposal. I also have knowledge and experience of practical, ethical, and safeguarding approaches necessary to ensure the research will be feasible and safe.

During the PCAF Bridge, I will contribute expertise in quantitative, qualitative, and mixed-methods research studies to support the development of the methods for the doctoral study. My particular experience in bridging the space between psychological theory and its application in clinical practice is essential to this project. Working in this area, implementation science has been a key domain of my research and so I will be able to support Dawn in exploring the relevance of the methodologies of implementation science.

My extensive experience of policy research will help Dawn to situate her proposal within the current policy landscape for children and young people's mental health. It will also enable Dawn to capitalize on my networks of policy makers, helping to devise concrete plans to ensure the wider impact of Dawn's research. Examples of my policy research include having been part of the Child Policy Research Unit (CPRU) and the North Thames CLAHRC. I am now a Co-I on the Mental Health Policy Research Unit (£4,998,118) lead by Prof Sonia Johnson, UCL, where I have been PI on a specific project examining research priorities on the role of screen use in mental health from the perspective of young people, parents/carers, and teachers. This project was used to inform decisions about future commissioning of research by the Department for Health and Social Care. I led a national study of the Children and Young People's Improving Access to Psychological Therapies (CYP IAPT) programme, which has led to peer-reviewed publications. This project was used by NHS England & NHS Improvement as part of the justification in obtaining further investment of ≈£10,000,000 to extend the coverage of CYP IAPT from 67% to 100% national coverage.

I have a track record of involving experts by experience in the design and delivery of research, and together with networks of young people and parent/carer experts by experience, where we use the Lundy model, will ensure Dawn is supported to work with these groups to develop and deliver her proposal.

Academic Expertise

I am the Module Lead at UCL for a course on applied child mental health research for doctoral and MSc students and I am the Programme Coordinator for a UCL PhD programme on evidence-based child and adolescent mental health (four completed students, five in progress students). I regularly supervise undergraduate dissertation students (three-to-five each year). My post-graduate supervision is predominantly with PhD students, and I do not

routinely supervise MSc students – I have supervised two completed MSc students, one of whom is now doing a PhD. I have four current doctoral students (three as 1st supervisor, one as second). I have supervised six completed doctoral students (one as 1st supervisor, five as 2nd supervisor).

At the Anna Freud Centre, I am our Division's equity, diversity, and inclusion (EDI) lead. I co-chair our LGBTQIA+ working group. I established our annual paid researcher internship scheme, which provides a three-month role for individuals from groups under-represented in psychology research careers and would otherwise not be able to take part in an unpaid internship. I am a member of the EDI committee at UCL. The infrastructure across the two organisations will be valuable to Dawn when developing her proposal to ensure inclusivity is incorporated throughout.

Supervision Plan

I will meet Dawn fortnightly throughout her bridge award, moving to weekly if there are phases where this is helpful. Our meetings will cover the proposal, training and professional development, and wellbeing. My topics of research, expertise in applied research in clinical contexts, and previous experience of PhD supervision mean I will continue to offer support as a member of her future PhD supervisory team.

Supervisor

SUPERVISOR 1

Name	Professor Nick Midgley

Institution	Anna Freud National Centre for Children and Families

Position	Co-Director of the Child Attachment and Psychological Therapies Research Unit (ChAPTRe)

Description of support provided
Professor Nick Midgley is co-director of the Child Attachment and Psychological Therapies Research Unit (ChAPTRe), a collaboration between the Anna Freud National Centre for Children and Families and UCL. He is Professor of Psychological Therapies for Children and Young People in the Research Department of Clinical, Educational, and Health Psychology at University College London. **Expertise in Research Area of Interest and Relevant Methodologies** Professor Midgley's primary research interest is in psychological therapies with children and young people, with a particular focus the use of qualitative and mixed methods. It is likely that the project's central research question will be best addressed using a range of methodologies and so this experienced in mixed methodologies is highly relevant. He has a strong commitment to examining the child's perspective on mental health and psychotherapy. This fits with the participation work Dawn is developing and will be valuable experience in thinking about appropriate and ethical ways to include vulnerable young people in research. Professor Midgley has worked in the adaptation of contemporary psychodynamic treatments, including mentalization-based treatments, for use with children and families. This theoretical approach will be a key area to explore in understanding the mechanisms of change in inpatient mental health treatment in this project. Professor Midgley is currently chief investigator on the National Institute for Health Research (NIHR)-funded Reflective Fostering Study as well as the Emotional Regulation in Children (ERiC) clinical trial, evaluating mentalization based treatment (MBT) for school-age children with emotional and behavioural problems referred to child and adolescent mental health services in the UK, funded by the Kavli Trust. He has secured over £9m of funding for research from sources including NIHR RFPB, NIHR PHR, UKRI, the Kavli Foundation. He will be able

to support Dawn to consider future funding sources to continue her post-doctoral research.

Academic Experience

Professor Midgley is the Academic Course Director for the professional doctorate in Child and Adolescent Psychotherapy (DPsych). This means he has particular expertise in supporting NHS clinicians with research and in the skills needed for research in the context of the NHS.

He has written seven books in the field of child mental health interventions and has almost 200 academic publications. Professor Midgley was awarded a UCL Teaching Award in 2018 for his contribution to teaching and learning at UCL, and in 2019 was elected a Senior Fellow of the Higher Education Authority.

He has supervised over 40 MSc students to completion and a significant proportion of those have gone on to complete PhDs, either at UCL or elsewhere. Professor Midgley has supervised 20 PhD and PsychD students. To date, 14 of these have been supervised to completion, a number remain in progress and there will be opportunities for Dawn to link to current PhD students.

Supervision Plan

Professor Midgley will be available for one meeting per month as a secondary supervisor and at least once a term we will meet jointly with Professor Edbrooke-Childs. He will review drafts and documents as needed between these meetings. He will be able to provide guidance from his extensive experience of research and relevant psychotherapeutic theory. The relevance of his academic research to the research questions and his experience in research in NHS and therapy contexts and in mixed methods studies mean that he would be an excellent PhD supervisor. He will also be able to connect me to other colleagues with relevant experience as the project develops to support the development of the supervisory team for the PhD.

Mentor

PRACTITIONER ACADEMIC CAREER MENTOR 1

Name	Dr Tom Jewell

Institution	Kings College London

Position	Lecturer in Mental Health Nursing

Description of support provided

Dr Tom Jewell is a Lecturer in Mental Health Nursing in the Florence Nightingale Faculty of Nursing, Midwifery & Palliative Care at King's College London. He is a Family Therapist and a Mental Health Nurse with over 15 years of experience working clinically in Child and Adolescent Mental Health Services (CAMHS). This includes having worked in inpatient CAMHS as both a nurse and family therapist.

From 2015-2020 Dr Jewell undertook an NIHR Clinical Doctoral Research Fellowship. His research investigated predictors of outcome and the process of change in family therapy for adolescent anorexia nervosa. This was combined with clinical practice within CAMHS. In 2021 he was awarded an NIHR Development and Skills Enhancement award, focussed on developing his knowledge of clinical trials.

Dr Jewell will be able to support me in navigating NIHR clinical-academic fellowships and in developing a clinical-academic career upon completion of a doctoral fellowship. His research and clinical experience connect to my research questions and clinical practice.

Dr Jewell continues to have an honorary contract at Great Ormond Street Hospital (GOSH) for his clinical practice and so will think with me about how clinical-academic roles fit within our wider clinical team (Psychological and Mental Health Services) at GOSH and to consider whether there are also opportunities in other organisations.

Dr Jewell and I will meet monthly during the fellowship. At the beginning of the fellowship we will also meet with both my academic supervisors to connect the team supporting me during the fellowship.

Collaborations

Clinical

I am a member of the Forum for Inpatient Child and Adolescent Psychology Services (FICAPS), a national network for psychologists working in inpatient CAMHS. The group is very supportive of research that develops the evidence base for inpatient CAMHS. It gives opportunities to collaborate with colleagues nationally. During the bridge award I will meet those who work with equivalent populations. This would include Dr Paul Abeles, Consultant Psychologist at Galaxy House in Manchester. I will also meet with my psychology colleagues at other children's units and intend to set up a sub-group as there is interest in ongoing meetings together.

Mildred Creak Unit is a member of the Quality Network for Inpatient CAMHS and additionally we are connected to other children's units via the Children's Inpatient Special Interest Group (CHIPSIG). Both FICAPS and CHIPSIG have annual conferences in the summer and these are good contexts to develop collaborations with colleagues. As an active member of both networks I would intend to attend both in 2023 and be able to plan with collaborators for future work. In 2024 I will present the scoping review at both these conferences to connect to colleagues and invite further collaborators as needed for the doctoral project.

Academic

I have agreed links with senior academics in the psychology departments at UCL and Great Ormond Street Hospital (GOSH) to support me and the project. Professor Peter Fonagy is Head of the Division of Psychology and Language Sciences at UCL and Chief Executive of the Anna Freud Centre. He is Senior National Clinical Adviser on Children and Young People's Mental Health for NHS England and has chaired major national expert groups. He will be an ongoing collaborator for the project reading key proposals, plans and papers and meeting as helpful and supporting the development of further connections as needed. Professor Roz Shafran is Chair in Translational Psychology and her role bridges UCL and GOSH and is based at the Institute of Child Health (ICH). Her role as an additional mentor will be very helpful, as she is an experienced academic in a prestigious position working across the clinical-academic institutions collaborating for my fellowship.

I will connect to researchers working in the area of inpatient CAMHS. Dr Samantha Hartley is a psychologist who has completed research on therapeutic relationships in the context of inpatient CAMHS, funded by an NIHR ACAF. I met with her in developing this application to understand both clinical-academic fellowships and the landscape of research in in inpatient CAMHS in the UK. I will have ongoing collaboration with her as a clinical-academic psychologist experienced with research in the NHS context. Dr Lucy Maddox is a clinical-academic psychologist working in the area of compassionate care in inpatient CAMHS and I will connect with her to explore possible collaboration.

Internationally, Dr Kasia Kowslowska is a psychiatrist working in Westmead Hospital in Australia who has researched and published extensively on the treatment of functional symptoms in hospital and the theory of change in this treatment. I will contact her team to explore future collaborations in research in this particular patient group in a hospital context using different models.

Establishing these connections and identifying other collaborators is a key task during the bridge award as one of my development needs is to develop stronger connections to academic colleagues and national networks so that I can both identify useful collaborations and understand the research landscape in inpatient CAMHS and its integration with clinical networks.

Host Organisation Support Statement
The following statement of support should be composed jointly by the heads of department of the employing host organisation and the partner organisation.

The Heads of Department of the host organisations will be able to add the statement of support to the form once they have confirmed participation. Invitations to participate are sent by the applicant via the 'Participants and Signatories' section of the form.

Statement of support

GOSH:

Great Ormond Street Hospital (GOSH) is a Research Hospital where research is an integral part of the working lives of our staff and the patients and families we treat and see. GOSH and UCL Great Ormond Street Institute of Child Health (ICH) were awarded NIHR Biomedical Research Centre (BRC) status in 2007, the award was renewed at every term end, most recently in 2022. We are the only solely paediatric-focussed BRC in the UK. There are strong support structures hospital wide for research which will benefit Dawn in her fellowship and in continuing her practitioner-academic career after her fellowship. For example, our participation lead can support Dawn with development of PPIE in the GOSH child health context.

The Centre for Outcomes and Experience Research in Children's Health Illness and Disability (ORCHID) will continue to support Dawn in developing a research career as an allied health professional (AHP). Since 2016 the ORCHID team has supported 24 AHPs in being successfully awarded NIHR clinical-academic fellowships, 13 of these were doctoral fellowships. Many of the pre-doctoral awards are current, of those completed two individuals have gone on to doctoral fellowships. Three of these doctoral fellows have completed their funding and successfully defended their thesis, two of this group now have post-doctoral awards from the NIHR including one advanced clinical academic fellowship. There are strong networks of support amongst this group of clinical-academic fellows.

Partnership with UCL for NIHR fellowships is well established with all of the above non-medical fellowships having been partnerships between GOSH and UCL. There are senior psychologists with roles across these institutions, including links to the Institute of Child Health, and Dawn will be offered additional mentorship by one of these, Professor Ros Shafran.

Dawn works in Psychological and Mental Health Services (PAMHS). PAMHS has a current focus on the development of research and the re-establishment of research structures (e.g. research committees). As well as continuing her role on the research committee Dawn will support the development of research roles within PAMHS, including considering how we can develop clinical-academic career paths within psychology and mental health for aspiring clinical-academics and build research capacity within the department.

Dawn will be supported to complete her bridge fellowship part-time alongside her permanent (0.5 FTE) clinical role on Mildred Creak Unit (MCU), one of only seven specialist children's inpatient mental health units in England. This allows the continued development of her clinical practice in this specialist setting. The team's monthly research meetings, facilitated by Dawn, provide an ongoing context for Dawn to access her colleagues support and experience and to co-construct the project with staff, families and patients.

GOSH has a strong diversity and inclusion framework 'Being seen and being heard' and a commitment to addressing systemic issues and ensuring that everyone feels able to bring their whole self to GOSH. GOSH is a Disability Confident Employer and a Stonewall Diversity Champion with active Race, Ethnicity and Cultural Heritage (REACH), The Pride Network, Enhancing Abilities and Leveraging Disabilities (ENABLED) and Women's staff forums.

UCL:

UCL is rated second in the UK for research power in the last Research Excellence Framework (2021) and is the top-ranked university in the UK for research in Psychology, Psychiatry, and Neuroscience. The Division of Psychology and Language Sciences (PALS) is world-leading in research and teaching on mind, behaviour, and language.

Dawn will be located in the Evidence Based Practice Unit (EBPU). Founded in 2006, the EBPU is a collaboration between UCL Faculty of Brain Sciences and the Anna Freud Centre (AFC). It bridges cutting-edge research and innovative practice in children's mental health, and Professor Julian Edbrooke-Childs co-leads this group. Dawn's project will be well supported by the unit's expertise in working with real-world evidence and in collecting and analysing longitudinal data, both qualitative and quantitative, to understand change over time in young people's wellbeing.

The unit's vision is for all children and young people's wellbeing support to be informed by real-world evidence so that every child thrives. The focus on real-world evidence is particularly relevant to this project, which will be taking place in the context of real-world NHS services and the complex interventions that they provide. The unit's mission is to bridge the worlds of research and practice to ensure that training, tools, and support are informed by the latest evidence. Again, this fits the project's intentions, to understand the ways in which psychological theory such as that of the therapeutic milieu translates into practice and treatment.

Dawn will also be connected via Professor Nick Midgely to the Child Attachment and Psychological Therapies Research Unit (ChAPTRe), another UCL-AFC research group. ChAPTRe has a focus on mechanisms and models of change in research, which will support the project's exploration of the way that the theoretical approach of an inpatient unit influences treatment.

Being situated with these research groups will enable Dawn to access infrastructure, support, and learning across multiple groups and organisations. There is a UCL Catalyst seminar series on Children and Young People's Mental Health, methods-specific peer support workshops, and lab meetings for PhD students, all of which will be available during the bridge award and the PhD. Dawn will have access to other resources, including library services, which provides support to researchers when conducting literature reviews, and a range of courses and learning opportunities. Other development schemes will be available, such as mentoring and shadowing of projects and areas of the organisations for practice-based learning. UCL provides research integrity training, and lab meetings provide ongoing spaces to discuss ethical and safeguarding practices in the context of research.

UCL's equity, diversity, and inclusion (EDI) strategy hardwires EDI into UCL's culture, teaching, and research. There are clear responsibilities ranging from the individual-level to the institutional one, and a range of trainings and practical tools to support the delivery of this. In addition to the top-down EDI initiatives, Dawn will have access to staff-led working groups which provide training and events, safe spaces for reflection, and opportunities to participate in organisation change through policies and practices.

5. Uploads

(Research Timetable - Training and Development Timetable Dawn Cutler 10-3-23.pdf) is included as an appendix within this file.

6. Detailed Budget

The finance section should provide a breakdown of costs associated with undertaking the Fellowship as described in the proposal.

This section must be completed by the Applicant in conjunction with the Research Support Office or Finance Office at the host organisation.

STAFF DETAILS 1

Staff type	Lead Applicant

Name	Dawn Cutler

Employing organisation	Great Ormond Street Hospital For Children NHS Foundation Trust

Role on this research	Lead Applicant

Grade	Band 8B

Starting point on scale	42

Increment Date	

Justification of Costs
Full time salary costs for lead applicant - current role with trust as Principal Clinical Psychologist is 0.5 FTE.

Details of Posts and Salaries Costs

	Total (£)
Salary (£)	68528
Geographical Weighting (£)	7377
Other allowances (£)	
Superannuation (£)	15697
Nat. Insurance (£)	9554
Current Annual Costs (£)	**101156**

Direct Costs
These are the costs that are specific to the Fellowship, which will be charged as the amount actually spent and can be supported by an audit record.

Staff Type: (Lead Applicant)-Dr Dawn Cutler
Type of cost: NHS
% Full-time on this research: 40.0
Total months on this research: 12.0
Justification of Cost: Salary Costs for Lead Applicant

	Year 1	Total Cost (£)
Basic Salary	27411	27411
National Insurance	3821	3821
Superannuation	6279	6279
Geographical weighting / Other allowances (if applicable)	2951	2951

Travel, Subsistence and Conference Fees

Type of cost: Other
Description: Conference Fees
Conference: True
Item Description: Children's Inpatient Special Interest Group Conference (summer 2024)
Justification of Cost: This is an annual informal one day conference where staff from all professions working on children's inpatient units in the UK meet together. There are presentations and opportunities to connect and network.

	Year 1	Total Cost (£)
	50	50

Type of cost: Other
Description: Conference Fees
Conference: True
Item Description: Quality Network for Inpatient CAMHS (QNIC) Annual Forum (June 2024)
Justification of Cost: Annual network meeting and conference for UK Inpatient CAMHS teams (child and adolescent units). One day conference located in London and so no travel costs associated.

	Year 1	Total Cost (£)
	70	70

Type of cost: HEI
Description: Conference Fees
Conference: True
Item Description: Implementation Science Research Conference (July 2024)
Justification of Cost: This two day conference is hosted by NIHR ARC South London annually in July and is an opportunity to learn about research in health contexts using relevant methodology from implementation science and to connect to other researchers using these methods. It is interdisciplinary and features plenary lectures from leading international researchers. It will also include oral and poster presentations organised under specialist themes, roundtable discussions, question and answer sessions, and online networking. It is a hybrid conference and so if the location is not easily accessible with minimal cost I will attend online. I am attending to develop my awareness of methodology in implementation science during the bridge award.

	Year 1	Total Cost (£)
	200	200

Type of cost: Other
Description: Journey Costs
Conference: False
Item Description: Travel: Children's Inpatient Special Interest Group 2023 (CHIPSIG) conference
Justification of Cost: Travel to CHIPSIG conference

	Year 1	Total Cost (£)

	60	60

Type of cost: Other
Description: Subsistence
Conference: False
Item Description: Accommodation: Children's Inpatient Special Interest Group 2023 (CHIPSIG) conference
Justification of Cost: Accommodation to allow attendance at CHIPSIG GOSH allowance per night as per travel and expense policy

	Year 1	Total Cost (£)
	120	120

	Year 1	Total Cost (£)
Travel, Subsistence and Conference Fees Total	500	500

Training And Development

Type of cost: HEI
Description: Short Courses
Item Description: JBI Scoping Review Workshop (Sept 2023)
Justification of Cost: This one-day online workshop hosted by the University of Aberdeen enables participants to explore the theories and concepts relating to scoping review and other types of evidence synthesis, and equips participants with the knowledge and tools required to successfully plan for and undertake a scoping review following the JBI approach. JBI programmes reflect internationally agreed methodologies and trainers are experienced in evidence-based practice and applied health research. Completing this will enable me to begin my bridge award with a scoping review.

	Year 1	Total Cost (£)
	200	200

Type of cost: HEI
Description: Short Courses
Item Description: Developing and Evaluating Complex Interventions (Spring 2024)
Justification of Cost: This online course run by the National Centre for Research methods / University of Southampton provides participants with an understanding of the complex intervention research process. It will support me in developing the methodology for my doctoral application. Presentations and activities relate to the main concepts of developing/identifying and evaluating complex interventions and support participants to apply the principles to their own research. The course will be structured around the MRC/NIHR Framework for Developing and Evaluating Complex Interventions.

	Year 1	Total Cost (£)
	150	150

Type of cost: Other
Description: Other
Item Description: Patient and Public Involvement and Engagement (PPIE) Costs
Justification of Cost: The following costs are associated with my plan for PPIE during the bridge award and will be paid in high street or online vouchers. Phase 2: One-off individual 30 minute phone consultations about project and developing best methods of participation (3 parents/carers, 2 young people, 2 young adults) 7 conversations paid at £20 per 30 minutes = £140 Phase 3 of PPIE: Discussion groups of one hour or less: 3 groups aiming for 4 parents/carers, 3 young people, 3 young adults 10 participants paid £25 for participation + £5 to support engagement from home (internet, IT, stationery etc) = £300 Phase 4: Donation to existing participation group (https://article39.org.uk/bloomingchange/) who will be consulted about project as part of collaborations 30 minutes of the groups time = £50 TOTAL £490 Rates taken from NIHR guidance payment guidance for researchers and professionals

	Year 1	Total Cost (£)
	490	490

	Year 1	Total Cost (£)
Training And Development Total	840	840

Summary

	Year 1	Total Cost (£)
Salaries	**40462**	**40462**
Travel-subsistence-and-conference-fees	**500**	**500**
Training And Development	**840**	**840**
Total	**41802**	**41802**

7. Participants and Signatories

Primary Academic Supervisor

Primary Supervisor Participant

Title	Professor
Forename(s)	Julian
Surname	Edbrooke-Childs
Position	Professor

Supervisor

Supervisor Participant

Title	Dr
Forename(s)	Nick
Surname	Midgley
Position	Lecturer

Mentor

Mentor

Title	Mr
Forename(s)	Tom
Surname	Jewell
Position	NIHR Clinical Doctoral Research Fellow

Clinical Support

Clinical Support Participant

Title	Dr
Forename(s)	Helen
Surname	Griffiths
Position	

Referees

Referee

Title	Mr
Forename(s)	Ben
Surname	Lindsay
Position	CEO

Referee

Title	Dr
Forename(s)	Sinead
Surname	Marriott
Position	

Host Organisation - Heads of Department

Head of Department or Senior Manager

Title	Professor
Forename(s)	Stephen
Surname	Pilling
Position	Professor

Head of Department or Senior Manager

Title	Dr
Forename(s)	Sian
Surname	Pincott
Position	Consultant, Directorate Chief of Service

Administrative Authority or Finance Officer

Administrative Authority or FO Participant

Title	Mr
Forename(s)	Kevin
Surname	Samuel
Position	Finance Manager

8. Acknowledgement, Review and Submit

Conflict checks:
Please declare any conflicts or potential conflicts of interest that you may have in undertaking this Fellowship, including any relevant, non-personal & commercial interest that could be perceived as a conflict of interest.

Agreement to Terms and Conditions:

I confirm that I have secured all necessary licences and ethical approvals in relation to the research and will abide by the terms of those licences and approvals in carrying out the research.

I confirm that I have read the NIHR Carbon Reduction Guidelines and, where possible, taken steps to reduce the carbon emissions generated by this research.

I confirm that all material within this application, with the exception of sections that other participants are required to complete, is my own work and I have taken steps to ensure that no parts of the application have been inappropriately plagiarised.

I undertake to conduct the research according to such guidelines for good research practice as the Host Organisation may from time to time laydown according to the NIHR research governance framework and the guidelines set out in 'Good Clinical Practice in MRC-funded Trials' (MRC 1998).

In completing this, I declare that, to the best of my knowledge, the information provided in this application, is true, accurate and complete. I have read the Guidance Notes and agree to accept the process by which an application is assessed and agree to abide by the conditions under which an award may be granted.

☒Confirmed

Appendices

1. Training and Development Timetable Dawn Cutler 10-3-23

Appendix #1: Training and Development Timetable Dawn Cutler 10-3-23

TRAINING AND DEVELOPMENT TIMETABLE
DR DAWN CUTLER
PCAF SEPTEMBER 2023 - AUGUST 2024

Clinical role: Principal Clinical Psychologist, Mildred Creak Unit, Great Ormond Street Hospital (GOSH) (0.5 FTE)
Pre-doctoral Clinical-Academic Fellowship Bridge Award (0.4 FTE)

Supervision
- Supervision Prof Edbrooke-Childs (fortnightly)
- Supervision Prof Midgley (monthly)
- Mentor Dr Jewell (monthly)
- Clinical Supervision Dr Marriott (monthly)

Host Organisations Research Networks and Support
- Catalyst Seminars on Children and Young People's Mental Health
- Anna Freud Centre Seminars
- GOSH Centre for Outcomes and Experience Research in Children's Health Illness and Disability seminars
- GOSH Psychological and Mental Health Services Research Meeting

Scoping Review
- Course: JBI Scoping Review Training (online)
- Complete Scoping Review
- Dissemination at conferences and within networks at GOSH and UCL

Patient and Public Involvement and Engagement
- Course: University College London Hospital PPIE Training (Online) FREE
- Additional reading and research about PPIE involving vulnerable children and young people
- Continued Informal discussion with current patients and families
- Phase 1: Contact people who have expressed interest in involvement
- Phase 2: Initial individual phone consultations
- Phase 3: Consultation groups
- Consultation with existing groups of experts by experience (timings and frequency TBC)

Conferences / Network meetings
- Quality Network for Inpatient CAMHS Annual Forum (London)
- Children's Inpatient Special Interest Group Conference and Network Meeting (2024 Dates + Location TBC)
- Forum for Inpatient Child and Adolescent Psychologists (FICAPS) Conference (Virtual)
- Implementation Science Research Conference (Hybrid Meeting)

Collaborations
- FICAPS meetings (quarterly)
- Contact with identified academic collaborators (Frequency TBC)

Doctoral Study Development and DCAF Application
- Refining research questions
- Planning methods
- Course: Developing and Evaluating Complex Interventions (online - 2024 Dates TBC)
- Course: Research Design Service Essential Guide Grant Applications (3 days - online) FREE
- Writing Doctoral Application
- Submitting Application

KEY: ■ One day or single event
Ongoing work thougout month
